Introducing ATH

Algorithmic Trading Hub

What is ATH?

ATH (Algorithmic Trading Hub) is a next generation utility and governance token built on the Solana blockchain. It powers a unified ecosystem of three interconnected financial products, AI driven trading intelligence, GameFi play to earn rewards, and real world crypto payments all accessible through a single token.

ATH is designed for traders, gamers, and everyday users who demand more from their on-chain assets. Whether you're executing algorithmic trading strategies, earning rewards through gameplay, or spending crypto in the real world via Whish Money, ATH is the engine behind every interaction.

Our Vision

To become the first Solana ecosystem token where every utility drives real demand, every transaction reduces supply, and every holder benefits from the seed investor to the everyday user.

Why ATH Exists

Today's crypto landscape is fragmented. Traders use one platform for signals, another for DeFi, another for gaming rewards, and yet another to convert earnings to spendable cash. Each hop costs time, fees, and trust.

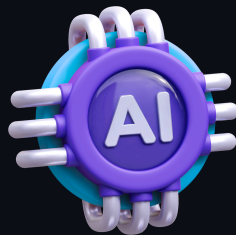

ATH eliminates the fragmentation. One token. Three utilities. One seamless ecosystem built for the 2026 Solana bull cycle and beyond.

Three Utilities

One Token Zero Fragmentation

ATH (Algorithmic Trading Hub) is a next generation utility and governance token built on the Solana blockchain. It powers a unified ecosystem of three interconnected financial products, AI driven trading intelligence, GameFi play to earn rewards, and real world crypto payments all accessible through a single token.

AI TRADING

ATH's AI Trading platform delivers institutional grade algorithmic signals directly to token holders. Strategies that previously cost \$500+/month on centralized platforms are now accessible on chain, paid in ATH, and fueled by a built-in burn mechanism.

How It Works

- Users subscribe to AI signal packages using ATH tokens
- Signals are generated by proprietary algorithms analyzing on chain data, order flow, and market structure
- 30% of all subscription fees are permanently burned
- Premium tiers unlock automated execution, portfolio tracking, and multi-asset coverage

Why It Matters Retail traders have always been disadvantaged against institutions. ATH levels the playing field and every new subscriber reduces supply.

Three Utilities

GAMEFI

ATH's GameFi layer introduces a play-to-earn ecosystem where gameplay directly generates onchain rewards and every inapp purchase reduces total supply. This creates a self-reinforcing loop: more players means more burning, which means more scarcity, which means more value for every holder.

How It Works

- Players earn ATH rewards by completing in-game challenges, tournaments, and missions
- In-app purchases and upgrades are paid in ATH
- 20% of all in-game spending is permanently burned
- On-chain leaderboards create competitive staking incentives

Why It Matters GameFi is one of the fastest growing segments in Web3. Unlike pure gaming tokens with no financial utility, ATH GameFi rewards can be used immediately for AI trading signals or real-world payments creating true cross-utility demand.

Three Utilities

PAYMENTS

ATH's Payments layer bridges the gap between crypto and everyday commerce through its partnership with Whish Money — a licensed crypto-to-fiat payment processor operating across MENA and beyond.

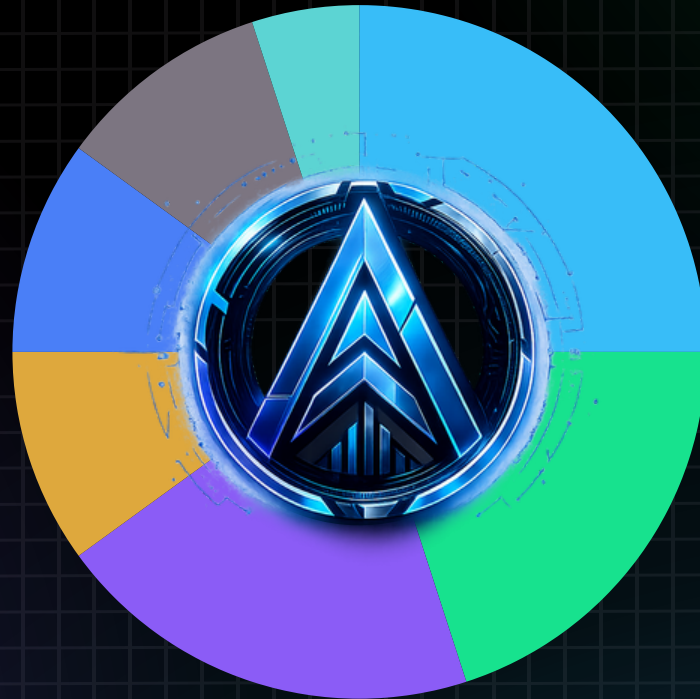

Crypto has long promised real-world utility. ATH delivers it. Token holders can spend ATH directly at merchants without managing exchanges, conversion steps, or wallet complexity.

How It Works

- Users spend ATH at partnered merchants via the Whish Money integration
- Whish Money handles instant crypto-to-fiat settlement — merchants receive local currency with zero crypto exposure
- 15% of every payment transaction fee is permanently burned
- Every real-world transaction strengthens ATH's deflationary pressure while expanding its utility footprint

Why It Matters Most crypto tokens exist only on-screen. ATH is engineered to live in the real world. Every coffee, every purchase, every transaction is a burn event — turning everyday commerce into a supply reduction mechanism that benefits every holder.

The Man

The Man

Behind ATH

Dr. Jihad is the visionary founder behind ATH, known for his dedication to innovation, leadership, and building solutions that inspire growth and transformation. His journey reflects passion, determination, and a commitment to creating lasting impact in the industry.

Dr. Jihad Kandil

CHAIRMAN & CTO

Dr. Jihad Kandil is an entrepreneur and international expert in artificial intelligence, blockchain technology, cryptocurrencies, and digital financial development. With more than a decade of professional and academic experience, he has established himself as a leading figure in the modern technological revolution.

His journey began in 2015 when he entered the world of financial technology and digital innovation. He started his academic studies in Geneva, Switzerland, specializing in blockchain technology and cryptocurrencies through an advanced master's

program focused on decentralized financial systems and the transformation of traditional economies into smart digital economies.

Later, he moved to Spain to continue his postgraduate studies in artificial intelligence, earning a master's degree specializing in AI technologies, intelligent systems, and data analysis. He then completed a doctorate combining artificial intelligence, blockchain technology, and cryptocurrencies — one of the most advanced and complex fields in modern technology.

Dr. Jihad's journey was not limited to academics alone. Throughout his career, he held managerial and strategic positions in several prestigious technology and financial companies and served as a consultant for organizations developing innovative solutions related to trading, blockchain, AI, and cryptocurrencies. He also contributed to projects involving digital currency regulations and modern financial technology infrastructure across Europe and the Arab Gulf region.

In addition to his executive roles, Dr. Jihad has actively contributed to education and training, teaching at institutions such as Nicolio Digital School in Spain and Nest Academy in Dubai, helping develop future talents in artificial intelligence, blockchain, and financial technology.

Like every successful entrepreneur, his path included challenges, setbacks, and market fluctuations, especially within the volatile cryptocurrency industry. These experiences shaped his belief that true success is measured not only by achievements, but by resilience, persistence, and the ability to rise after every challenge.

Today, Dr. Jihad considers the establishment of Algorithmic Trading Hub (ATH) his most significant achievement. ATH is a comprehensive ecosystem that integrates artificial intelligence, smart algorithms, big data analytics, and modern trading technologies to create an advanced and efficient investment environment.

The project focuses on developing intelligent algorithmic trading systems capable of analyzing markets and making accurate AI-driven decisions. It also includes the launch of ATH Token through blockchain-based private sales, representing a strategic step toward building a decentralized digital financial ecosystem.

Dr. Jihad Kandil believes the future belongs to those who understand technology and successfully integrate it into economic and financial life. Through ATH and his ongoing innovations, he continues working toward building intelligent systems that connect finance, technology, and people on a global scale.

His story is not simply a success story, but the journey of a visionary who believed in an idea, embraced challenges, learned from failures, and persevered to become part of the generation shaping the future of artificial intelligence and financial technology in the Arab world and beyond.

The People

Behind ATH

ATH is built by a team of experienced professionals spanning blockchain development, algorithmic trading, financial management, and global marketing united by one mission: to make algorithmic trading accessible to everyone.
